

Leveraging a statewide SIF infrastructure for seamless Generate reporting

Introductions

- ◎ Elizabeth Brunet, AEM
- ◎ Johnny Cunningham, AEM
- ◎ Jay Pennington, Iowa DE
- ◎ Roger Peterson, Iowa DE
- ◎ Ben Silberglitt, Cedar Labs

Agenda

- Why Generate
- Iowa's journey
- SIF → Generate pilot project
- Next steps
- Q&A

1

Why Generate

Generate

Generate Status Nationally

22 SEAs currently implementing Generate

17

States with current CIID intensive support

- Iowa
- Colorado
- Kansas
- Maine
- Michigan
- Minnesota
- Mississippi
- Montana
- Nebraska
- New Hampshire
- New Jersey
- Oklahoma
- South Carolina
- Utah
- Vermont
- Washington
- West Virginia

5

Additional States are implementing or have implemented

- Nevada
- Kentucky
- Minnesota
- Bureau Indian Education
- Commonwealth Northern Mariana Islands

Generate Community

- Generate Governance Group (G3) Leadership
- Generate Governance Group (G3) Interest Group
- CEDS Open Source Community
- CIID Technical Assistance

2

Iowa's EdFacts journey

Where we've been and where we are going

Infrastructure overview

- ◎ Iowa data collection modernization strategy
- ◎ Revamped student level collection built on A4L SIF/Unity
- ◎ Iowa's SLDS is a system of systems jointly owned and governed by multiple agencies within and outside the Iowa Department of Education

Project History

- EdFacts files contain data from multiple sources
- Most are compiled manually using SAS and pockets of old school spreadsheets
- Requires significant coordination and communication
- Uneven QA efforts
- Latency in review by program offices

Opting for Generate

- ◎ Some CEDS groundwork in place already
- ◎ Streamline and improve EdFacts reporting
- ◎ Impending retirement of EdFacts coordinator
- ◎ Funding via FY19 SLDS Grant
- ◎ Technical assistance from CIID

Project Goals

- Improve efficiency through automation – eliminate wait times for manually pulling data
- Reduce error risk
 - Less manual work
 - More time, better format for data steward review
- Improve data quality
 - Retrieve data at the source
 - Use Generate's built-in QC

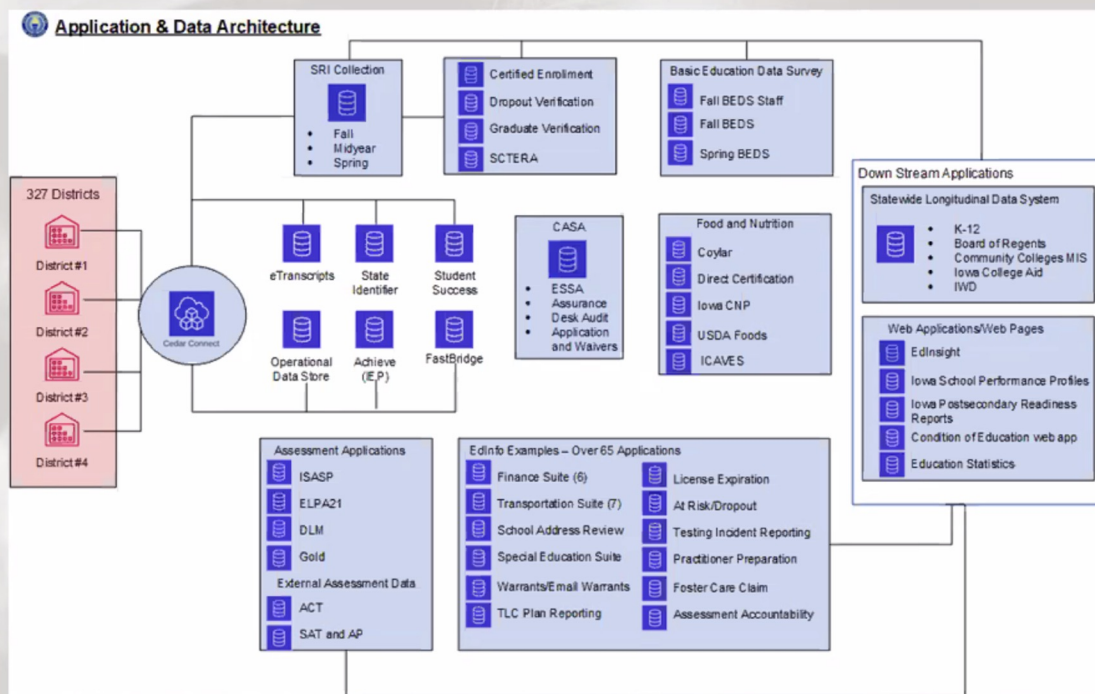

Current Project Status

- ✓ Map data elements to CEDS
- ✓ Validate CEDS mappings
- ✓ Review business rules
- ☐ Write and validate ETL code (in process)
- ☐ Stand up Generate in dev environment
- ☐ Run new ETL on prior year source data and compare to prior year EdFacts submissions
- ☐ Update process, mappings, and code as needed

3

A4L SIF Unity → Generate pilot

SEA Data Collections and Constant Change

About Cedar Labs

- ◎ Solutions for data integration, validation, state and federal reporting, and data privacy
- ◎ Statewide implementations across the US and Australia, serving over 3 million students
- ◎ Cloud-native technology provides scalable, real-time integration
- ◎ Standards-agnostic approach: “meet them where they are”

Why SIF

- Longstanding, effective infrastructure in place based on SIF standard
- CEDS-aligned with common vocabulary
- Modern REST API
- Supports cloud-native technology
- [Performance test](#) demonstrated ability to process 350m records / hour

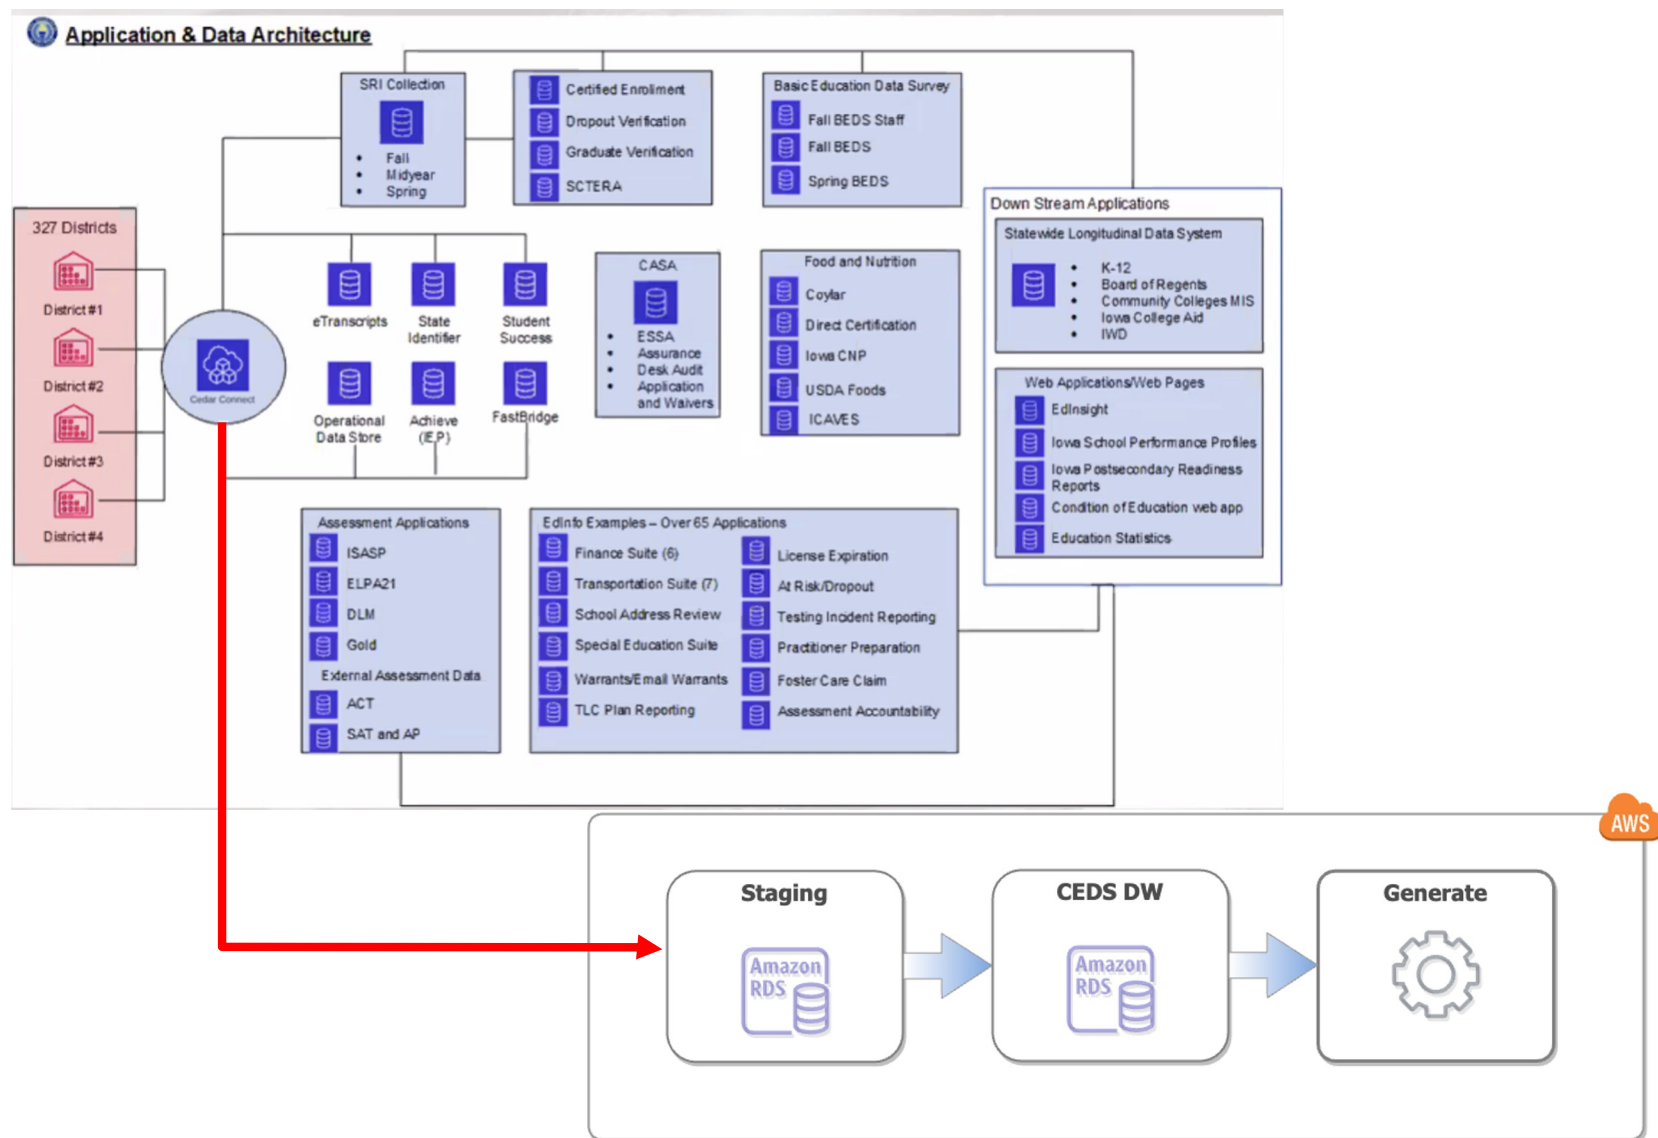

Project Goals

- Leverage existing infrastructure to create a seamless Generate implementation
- Apply SIF → CEDS mapping in a real-world environment
- Identify and eliminate barriers to future implementations in the community
- Realize success in a short timeline

Steps to Success

- Map Iowa SIF Profile to Generate reports
- Identify best proof of concept candidate reports
- Deploy CEDS DW and Generate in the cloud (AWS)
- Connect data and create candidate reports
- Compare results for calibration

SIF → Generate

- ◎ Common vocabulary simplifies process
- ◎ SIF *profiles* tend to be focused on state reporting needs
- ◎ Five report candidates identified based on:
 - Available data
 - Scope of work given short timeline
 - Breadth of examples for PoC
 - Likely interest level

Reports

- 033 Free Reduced Lunch
- 039 Grades Offered
- 052 Membership
- 086 Students Involved with Firearms
- 195 Chronic Absenteeism

Generate Cloud Deployment

- ◎ Goal: Simplify implementation by extending current AWS deployment
- ◎ Hurdles:
 - Tightly bound to Active Directory / requires multiple environments
 - Documentation geared towards on prem
- ◎ Successes:
 - Built lightweight authentication module
 - Troubleshoot documentation and modified to fit AWS deployment scenario

Report Creation

- Mapped all 5 reports from SIF profile to CEDS staging tables
- Populated staging and CEDS DW
- Successfully created all 5 reports via Generate
- Calibration in progress

Next Steps

- ◎ Share Generate Authentication Module code back with Open Source Community
- ◎ White paper coming on Generate deployment on AWS
- ◎ Review as a team to discuss implications for Generate implementation
